SUMMARY

Python Full Stack Developer with 5+ years of experience designing, developing and supporting cloud native applications using Python, AWS, React and TypeScript. Hands on experience building Python based AWS Lambda functions, REST APIs, serverless workflows and frontend components, with strong exposure to AWS development and non-production environments. Experienced with Git based development, CI/CD pipelines, unit and end-to-end testing, debugging and AI assisted coding practices. Proven ability to translate business requirements into scalable application solutions across financial services and enterprise environments.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, SQL, Bash, Node.js, Java.

Backend: Python, Django, Flask, REST APIs, JSON, Microservices, Serverless Applications, Event-Driven Applications

Frontend: React.js, TypeScript, JavaScript, HTML5, CSS3

AWS & Cloud: AWS Lambda, API Gateway, SQS, Step Functions, S3, DynamoDB, EC2, ECS, ECR, EKS, CloudWatch, IAM, Route 53

API Development: REST APIs, API Design, Request Validation, JSON, Error Handling, Authentication/Authorization, API Integration, Postman

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis.

Testing & Quality: PyTest, Unit Testing, Integration Testing, API Testing, End-to-End Testing, Regression Testing, Postman, Jest, Cypress

CI/CD & Version Control: Git, GitHub, GitHub Actions, Jenkins, CI/CD Workflows, Pull Requests, Branching Strategies

AI-Assisted Development: AI Coding Assistants, Code Generation, Code Review, Refactoring, Debugging, Test Generation, Prompt Engineering

Development Tools: Visual Studio Code, Git, Postman, Linux, Jira

Application Monitoring: AWS CloudWatch, Application Logging, Log Analysis, Troubleshooting

WORK EXPERIENCE

State Street

February 2024 - Present

Python Full Stack Developer

United States

- Develop cloud native financial applications using Python and AWS, building backend services supporting investment management workflows involving portfolio positions, holdings, transactions, cash balances, reference data and operational processing across development and non-production environments.
- Build and enhance Python based AWS Lambda functions for REST API processing, business rule execution, data validation, event handling and application integrations using API Gateway, SQS, Step Functions, S3 and DynamoDB, helping improve asynchronous backend processing efficiency by approximately 20%.
- Design and develop secure REST APIs with structured JSON request/response models, authentication, validation, exception handling, logging and error management, improving service integration and reducing API related processing issues by approximately 15%.
- Develop and integrate React and TypeScript frontend components with Python REST APIs, delivering interactive investment data views, operational workflows, processing status screens and exception management functionality across frontend and backend application layers.
- Independently build, configure, test and deploy application changes within AWS development and non-production environments, validating Lambda functions, APIs, frontend components and service integrations and helping reduce development and testing turnaround time by approximately 20%.
- Use established CI/CD pipelines and Git based development workflows for application builds, automated testing, non-production deployments, pull requests, peer code reviews and controlled production releases, collaborating with platform teams responsible for pipeline infrastructure and production cloud operations.
- Write PyTest based unit, integration, API and end-to-end tests for Python modules, Lambda functions, REST APIs, business rules, React integrations, edge cases and failure scenarios, helping improve test coverage by approximately 25% and reduce application defects by approximately 20%.
- Use AI assisted coding tools for Python and TypeScript development, debugging, refactoring, test creation, documentation and code analysis, helping reduce development effort for repetitive coding and testing activities by approximately 20% while reviewing generated output for correctness and maintainability.

HCL Tech

January 2021 - July 2023

Python Full Stack Developer

Hyderabad, India

- Developed Python based backend services and REST APIs for enterprise web applications, implementing business logic, request validation, exception handling, JSON processing and integrations between frontend applications, databases and external services.
- Built application components using AWS Lambda, API Gateway, SQS, S3, DynamoDB, EC2 and CloudWatch, supporting serverless and event driven workloads and improving backend processing efficiency by approximately 15%.
- Developed reusable Python modules and microservices for data processing, application integrations, business rule execution, validation and error handling, reducing duplicated development effort by approximately 20%.
- Built responsive frontend functionality using React, TypeScript, JavaScript, HTML and CSS, integrating UI components with Python REST APIs to deliver end-to-end application workflows and improve application usability.
- Worked with PostgreSQL, MySQL, MongoDB and DynamoDB, developing optimized queries and application data access logic that helped improve application data retrieval performance by approximately 15%.
- Followed Git based development practices including feature branching, pull requests, peer code reviews, defect fixes and version control while using established CI/CD workflows to build, test and deploy application changes into development and testing environments.
- Developed unit, API, integration, regression and end-to-end tests, helping increase test coverage by approximately 20% and reduce defects identified during later release stages by approximately 15%.
- Troubleshoot application issues using Python debugging, Postman, application logs and AWS CloudWatch, collaborating with product owners, QA engineers, developers and platform teams to reduce average defect resolution time by approximately 20%.

EDUCATION

University of Wisconsin Milwaukee

Master of Science in Computer Science

Aug 2023 – May 2025

Milwaukee, WI

Gandhi Institute of Technology and Management

Bachelors in Computer Science

Aug 2019 – April 2023

Visakhapatnam, India

RESEARCH

Gandhi Institute of Technology and Management

March 2023

Research Assistant | Springer ICDSAI 2023

Visakhapatnam, India

- Designed and developed an end-to-end Python application for automated web data collection using BeautifulSoup and Selenium, transforming unstructured review data into structured datasets for downstream AI and NLP processing.
- Built NLP pipelines using NLTK, spaCy and TF-IDF for text cleaning, tokenization, feature extraction and sentiment analysis, integrating processed data with multiple machine learning classification models including Naive Bayes, Logistic Regression and SVM.
- Evaluated and optimized AI/ML models using cross validation, confusion matrices and accuracy analysis, applying testing and quality-validation practices before integrating the selected model into the application.
- Developed a Flask based Python web application for real time sentiment prediction and visualization and deployed the solution on AWS EC2, demonstrating end-to-end application development from data processing and AI integration through testing and cloud deployment.
